We recommend reading through the entire booklet prior to proceeding with the installation, service or maintenance. All references to the right and left throughout this guide are as viewed from the front of the restroom.

General Product Overview
This re-circulating flush system is designed specifically for the PJN3 model portable restroom. It has an aesthetically contoured waste holding tank with a sloped top to drain away fluid and an integrally molded seat base and bowl to provide a strong “swirlpool” flush. The large hinged lid with a built-in prop rod acts as an access port for service and maintenance. **NOTE**: *We discourage pumping through the flapper valve as damage may result.*

~~Tools Required~~
- Rivet Gun
- Drill with 13/64” bit
- 7/16” Socket wrench
- Screwdriver
- 1-1/8” Hole saw (if sink is used)
- Tape measure (if sink is used)
- 2-5/16” Hole saw (if urinal is used)

Full Size Scale Fasteners

(8) PC-000106 Washer
(1) PC-000139 Bolt
(1) PC-000123 Washer
(8) PC-000103 Rivet
**Waste Tank Installation:** For shipping purposes, the pump is fastened under the lid with the necessary parts for final assembly and installation. Use a 7/16" socket wrench to remove the pump from the lid. Attach it to its proper location as illustrated in the exploded view, and attach hoses with #12 hose clamps. The CH100-050 hose connects to the out port on the pump. The CH100-0165 hose connects to the in port on the pump. Attach the toilet seat to the tank. Position the tank so that it is centered between the side panels and pushed up to the floor plate. There are drill spots on each of the wall panels. Push the wall panels in flat against the tank and drill (8)13/64" holes through the specified drill spots and through the wall of the tank. **CAUTION: DRILL ONLY THROUGH THE OUTER WALL OF THE TANK. DO NOT DRILL THROUGH THE INSIDE TOP SURFACES OF THE TANK.** On the outside of the restroom rivet the tank in place using (8) PC-000103 rivets, while another person inside the restroom places PC-000106 back-up washers on the rivet stems on the inside of the tank.
